

# TOWER BOX CONVERSION KITS

HYDRUS Tower Box Conversion Kits allow you to update your old tower box controls. Our kit comes with everything you need for an easy installation. The kit includes the “Valley Style” tower box, tower box mount, alignment arm, alignment arm keeper mount, and the hardware package. On End Towers, you would only require the “Valley Style” end tower box, tower box mount, and the hardware package.

The tower box and alignment arm keeper mount are hot dipped and galvanized. These bolt-on kits allow you to mount the tower box and alignment arm keepers without having to modify or weld on the existing structure. We do make a combination weld-on or bolt on tower box mount for Lockwood systems as well.

- Includes “Valley Style” tower boxes
- UL Labeled
- All galvanized tower box and alignment arm keeper mount
- Kit includes everything needed for the conversion
- All “Valley Style” tower boxes come with stiffener bracket
